

# Semiconductors

European leader in advanced technology solutions

## About Acal BFi

Acal BFi are Europe's leading provider of advanced technology solutions, operating in 12 countries throughout Europe.

We offer products across specialist technology areas, each with a dedicated pan-European sales team. Customers use our design-led expertise and expert consultation services to find the best technology solutions for their design, prototype and production needs.

## Get in touch

Acal BFi UK Limited,  
3 The Business Centre,  
Molly Millars Lane,  
Wokingham,

RF and Frequency control

Sensors

## A wide range of cutting-edge semiconductor solutions

We provide a wide range of semiconductor solutions from class-leading, global manufacturers, so our customers benefit from the most advanced technology available. This range includes cutting-edge, application-specific processors and ancillary products, as well as the latest storage technologies. Our field application engineers can help you find the optimum solution for your application.

## Rely on our semiconductor technical experts to ensure fast, dependable support

Our field-based, factory-trained experts are available to support you throughout the design process, reducing your development time. Once your design moves into production, we provide a logistics model to suit your requirements, reducing production costs and cost of ownership.

**consult. design. integrate.**

## Support from design to production

Acal BFi combine a portfolio of the industry's most advanced technology with specialist expertise to deliver design consultancy, programming and logistics services that deliver the best possible solution for your application.

### Designing to your requirements

- **Design consultancy** – our highly qualified and experienced application engineers continually review and assess new products and technologies from the industry's leading manufacturers. Our engineers have access to the latest product development design roadmaps, which means they can work with your design teams to select the best building blocks for your design and fine tune your products for maximum performance, whilst achieving an accelerated time to market.
- **Device programming** – we will work with you to deliver FLASH-based microcontrollers fully programmed with your code, giving you devices which can be directly used in the manufacturing process with no additional processing steps. You will be able to order using a bespoke part number to avoid mistakes and simplify inventory management. All programmed devices are programmed using manufacturer-approved programmers in our ISO9001-accredited facilities, with device handling in line with appropriate JEDEC recommendations and standards.
- **Production services** – to streamline your procurement and production process we offer a number of packaging options, as well as custom kitting and barcoding, and all complete devices will be supplied marked according to your requirements to ensure a smooth process. We can also deliver products based on different logistics models including just-in-time, Kanban and ship-to-line, so you can choose the most efficient option for you. As well as these services we can now offer even more.

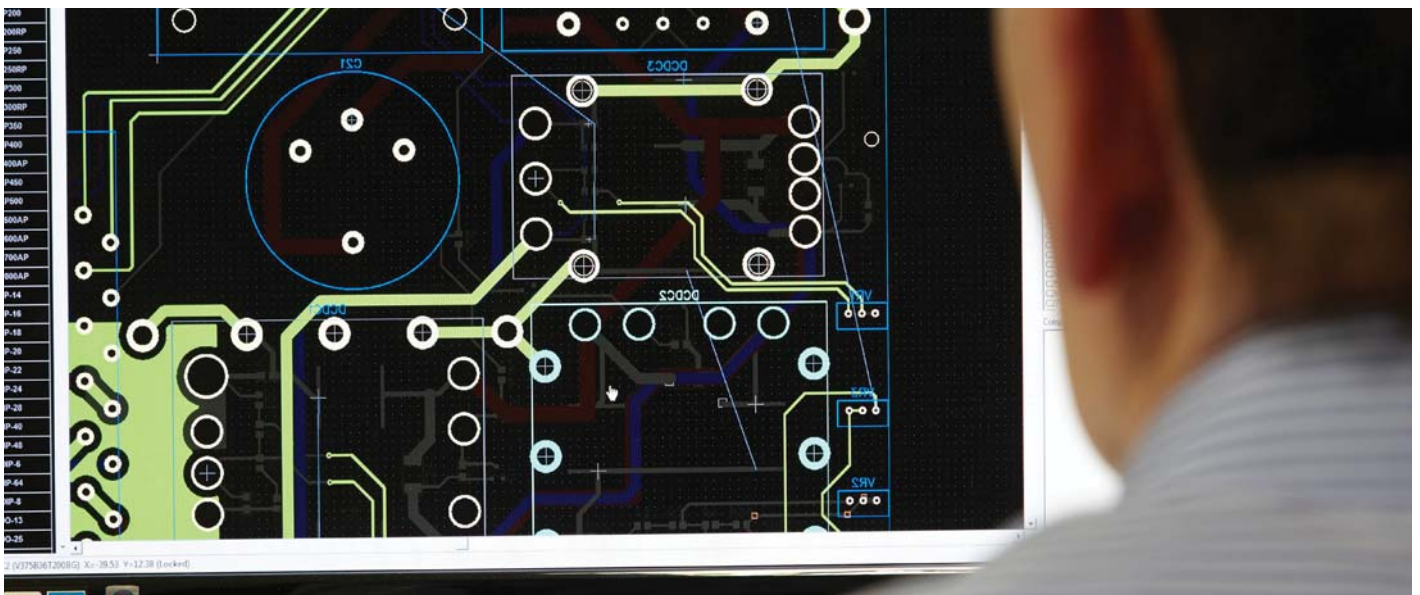

### Introducing Locator

Established for more than 25 years and now operating as part of Acal BFi, Locator are a specialist sub-contract manufacturer with a range of services that go far beyond just manufacturing. These solutions can be tailored to individual customer needs and include:

- component sourcing and supply
- logistics and stock management
- kitting and production management, and
- prototyping, PCB assembly, manufacturing and test.

Give us a call to discuss how we can help with your challenges.

## Key partners overview

Acal BFi work with the leading manufacturers in their field, offering you a complete solution for all your semiconductor needs.

**Advanced Crystal Technology (ACT)** are an established leading global supplier of frequency control products. They provide a vast portfolio of standard products, they can provide custom products on short lead times, and they have in-house test facilities.

**Adlink** are a world-class provider of industrial components and application platforms, including SATA memory for embedded computing, measurement and automation applications.

**Applied Micro** are a global leader in computing and connectivity solutions for next-generation cloud infrastructure, high-performance computing and data centres. With a strong heritage in innovation, and commitment to energy efficiency, AppliedMicro are bringing breakthrough technology advances to telecommunications, data centres, enterprise and consumers. They have created the world's first server-on-a-chip solution based on ARM 64-bit processor technology.

**Cavium** provide a broad portfolio of highly integrated multi-core MIPS processors for processing applications with strength in deep packet inspection and security offload cards for load balancing in virtualised environments and cloud servers.

**Delkin Devices** specialise in rugged controlled storage products with enhanced shock and vibration specifications and industrial temperature ranges for extreme environments.

**Epson** are the world's largest producer of high-quality, crystal-based electronic devices and applied technologies.

**GSI Technology** -design and develop the market's largest portfolio of high-speed, synchronous SRAM and LLDRAM (low latency DRAM) products for networking, military and medical applications.

**HGST**, a Western Digital company, develop innovative, advanced hard-disk drives, enterprise-class solid-state drives, external storage solutions, and services used to store, preserve and manage the world's most valued data.

**Microchip** are the leading provider of microcontroller, analogue and memory technology, offering a broad portfolio of wired, wireless and low-power solutions which are cost effective, low risk and deliver faster time to market.

**New Japan Radio (NJR)** have been designing and producing microelectronic and microwave technologies for nearly half a century. They have expertise in broadcasting, satellite, terrestrial communications and security applications.

**Skyworks** are an innovator of high-performance, analogue semiconductors.

**Swissbit** are a specialist in the memory industry that design and deliver high-quality, but cost-effective, DRAM and solid-state drives, such as compact flash, 2.5 inch drives, MO297, MO300, SD and microSD. The products are used in demanding commercial and industrial applications.

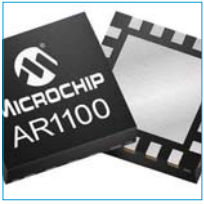

**Taitien** are a leading manufacturer of quartz-based frequency control products, including crystals and oscillators.

**Winbond** are an innovative memory IC company providing customer-driven solutions backed by proven expertise. They deliver DRAM, NOR Flash and Memory IC products for consumer, communication and automotive applications.

# Key technologies and suppliers

## The Acal BFi semiconductor portfolio

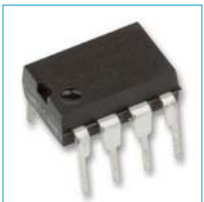

### Analogue / mixed signal

- A-to-D converters
- Battery chargers
- Comparators
- CPU / system supervisors
- OP amp
- Power MOSFET drivers
- Switching regulators
- Temperature sensors

### Audio / special function

- Audio processors
- DSP
- Audio effects
- 3D audio processors

### Memory and storage (board level)

- DRAM
- EEPROM
- FLASH
- SDRAM
- SRAM

### Memory and storage (system level)

- Compact flash
- FLASH
- Micro SD card
- Solid-state drives (1.8 and 2.5 inch)

### Telecom / datacom (Phy / SERDES / Framer)

- Ethernet / packet opticals
- OTN
- SDH / SONET

### Microprocessors

- ARM – 64 bit
- MIPS – 64 bit
- PowerPC – 32 bit
- Security processors
- Video processors

### 8-bit microcontrollers

- A/D converter
- Capacitive touch interface
- Comparator
- EEPROM
- Timers
- MSSP
- PWM
- UART
- USB

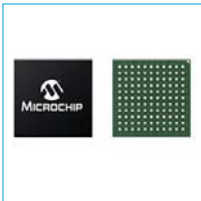

### 16-bit microcontrollers

- FLASH-based program memory
- On-chip peripherals include:
  - A/D converter
  - Capacitive touch interface
  - Comparator
  - D/A converter
  - DMA
  - Operational amplifier
  - PWM
  - Timers
  - UART

### 32-bit microcontrollers

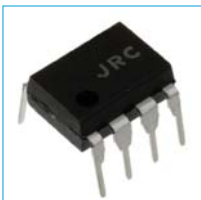

- FLASH-based program memory
- On-chip peripherals include:
  - A/D converter
  - CODEC
  - DMA
  - Ethernet
  - I<sup>2</sup>C
  - PWM
  - SPI
  - Timers
  - UART
  - USB

### Microprocessor peripherals

- I<sup>2</sup>C to parallel converters
- Serial to parallel converters
- Monolithic timers
- Input key scanners

### Video switches

- Multiple input switches
- Video imposers / super imposers
- Video switch matrix

### Crystals, oscillators and real time clocks

- Ceramic resonators
- Crystals
- VCO and OCXO
- Oscillators
- PLL
- Real time clocks
- TCXO and VCTCXO
- Watch crystals
